WEATHER SYNOPSIS BY REGION

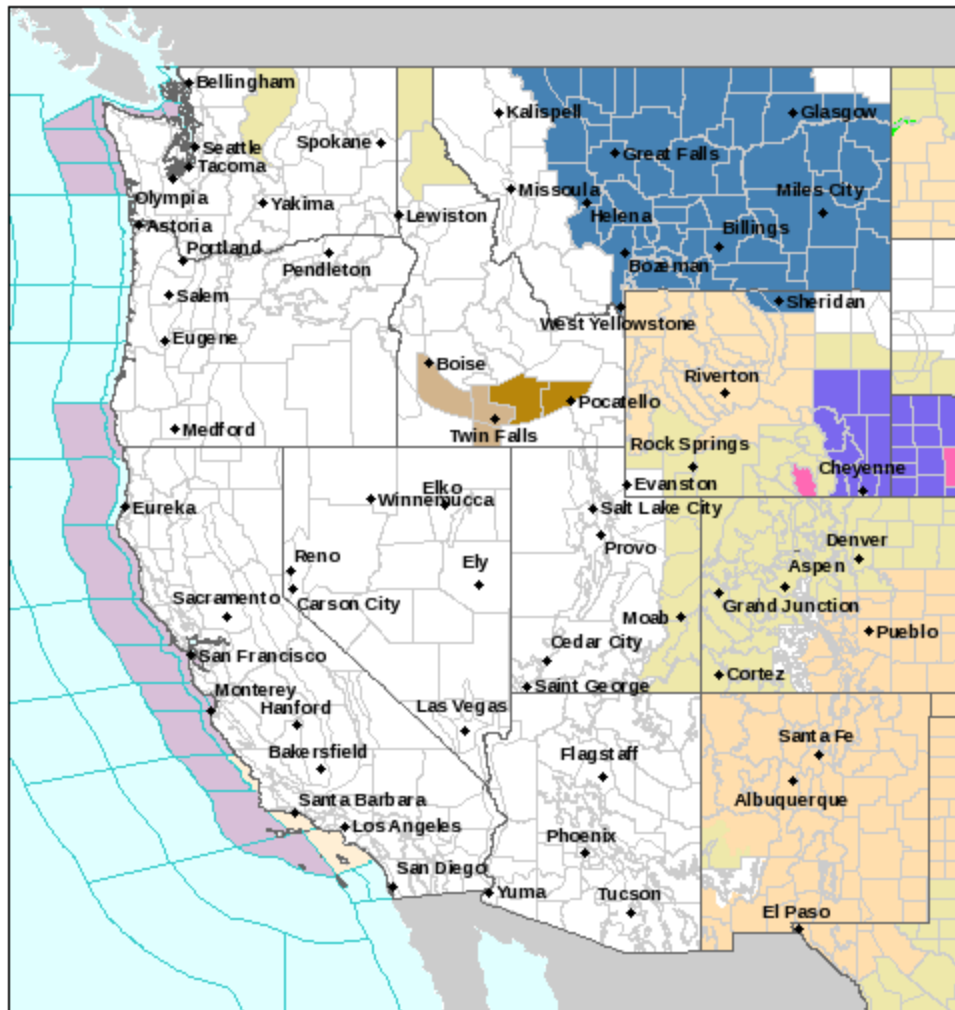

NORTHERN CALIFORNIA

A few more degrees of cooling is expected on Sunday as onshore flow increases. Dry weather and seasonable temperatures are forecast to persist through the middle of the week. Increasing clouds on Thursday will lead to rain chances late Thursday night and Friday. At this time, models keep the heaviest rain amounts north of our area. Things could change by the time this event arrives, but for now the best chance for significant rain will be over the North Bay. Rain to turn to showers by Saturday.

SOUTHERN CALIFORNIA

A low pressure trough off the West Coast will dim the Spring sun with considerable high cloud cover at times the next few days. At the same time a shallow marine layer will deepen, with the potential for nocturnal low clouds and fog to spread farther inland through Tuesday morning. Slow cooling will spread inland through Sunday, with greater cooling Monday and Tuesday. Subtropical high pressure will bring a warming trend for Wednesday through Friday with the marine layer becoming gradually shallower.
